

Five reasons to move your business to the cloud

The cloud is integrated into every part of our world. From online shopping to your cloud hosting services - you don't want to miss out on business opportunities by not being in the cloud!

Accessibility

The cloud allows data and applications to be accessed from multiple devices and from anywhere, making it much easier for teams to collaborate on shared data.

Lower Costs

Regardless of the size of your business, you can save money when you operate with a cloud-based model. Instead of the high and mounting costs of equipment, software, and infrastructure, you can pick a cloud package that suits your needs.

Zen J. ★★★★★

Absolutely pleased with MyCREcloud as they were very responsive to our implementation and integration start-up processes. We made the right decision to use them.

Enhanced Security

Storing data in the cloud provides an extra layer of security. Your data is securely stored and can immediately be recovered from a backup.

Flexibility & Scalability

Cloud computing offers flexibility and agility. Scale your cloud usage up or down on an as-needed basis and only pay for what you are actually using.

Simplified App Hosting

Access your applications from one central location. All updates or software changes are handled by the cloud provider, meaning less work for your IT team.

We offer live IT support from professionals specializing in the cloud. Supplemental IT or full IT department offerings available.
